

This document reviews the significant enhancements to DentaLab for QuickBooks (DQB) and DentalRx in the 2022 April Release 1.70 based on requests and suggestions from users of the system as well as the technical support staff.

### **DQB and DentalRx: Fundamentals for Compatibility and Security**

To maintain compatibility with the latest software from the major providers such as Microsoft for Windows 11 and the .Net Framework and Intuit for QuickBooks, we have applied the technical changes required.

In addition, there are continual upgrades to internet security measures that are needed to guard against theft of information, ransomware, and other dangers.

### **DQB Advanced Installer**

For installation of both the licensed versions of our software and trials/demos, we now have a new utility called Advanced Installer. This tool has been designed to handle conflicts with other SQL based software for installation of the SQL database and to provide timely messages to you from our servers whenever needed.

### **DQB Barcode Scan for Case Lookup**

There are several forms within DQB that include a barcode for the case number but do not require licensing of the DQB Barcoding supplement. These include some of the case labels, work tickets, and the print prescription/image option in the DQB Images/Digital File supplement. We have added the special code needed for scanning barcodes to the Case Lookup field in the DQB menu for those who prefer to scan rather than key in the case number.

### **DQB Expansion of Customer Contact Fields**

We have had a number of requests to provide for synchronization and use of more of the QB fields related to contact information for customers.

Currently DQB synchronizes the following:

- Main Phone
- Fax
- Main Email
- Company Contact Name

The QB Online Pro, Premier and Enterprise versions have added these contact fields:

- Work Phone
- Mobile Phone
- CC Email
- Website

The connector program has been expanded to synchronize these above QB fields into DQB.

### **Enhancements to Contact Information**

With this release, we have expanded the contact information in most of DQB, but not yet in the Notifications supplement and possible expansion of the Address Book.

Basic Lists-Customers: Now shows all the QB contact fields in top frame, rearranged so that like fields (phone, email) are close together and clearly identified.

Cases: The Doctor Information frame now shows all the QB contact fields, rearranged so that like fields (phone, email) are close together and clearly identified.

Customer List: Action to Customize Columns has been expanded to add new fields.

Customer Center: Now shows all the QB contact fields in top frame, rearranged so that like fields (phone, email) are close together and clearly identified.
